## Summary

Aspiring Software Engineer with a solid foundation in programming, and hands-on experience in AI and full-stack development through internships and hackathons. Seeking opportunities to leverage proven skills in building scalable applications and intelligent systems.

## Education

**Thadomal Shahani Engineering College** — CGPA 9.43
*Bachelor of Engineering in Artificial Intelligence and Data Science* — *November 2022 – June 2026*

## Experience

**Fullstack Intern** — June 2025 – July 2025
*Augenblick Consulting* — *Remote*

- Implemented Deep Zoom Technology, improving large image rendering speed by 60% and enabling seamless web-based navigation of gigapixel images.
- Contributed in building a RAG-powered system that converts RIS files into vector embeddings, reducing manual research paper tagging efforts by 80%, and enabling automated classification with rule-based filtering.

**AI Intern** — January 2025 – April 2025
*Nimrobo AI* — *Remote*

- Created a tool enabling agentic AI to query and interpret CSV data using SQL for advanced data analysis and insights.
- Integrated citation tracking into AI Agent outputs, enhancing content credibility and reducing hallucinated responses by 30%.
- Developed a container orchestration system that automatically spins up isolated AI agent instances with WebSocket access, and automated lifecycle management, improving scalability and reliability by 20%.

## Projects

**CollabNext** | *Next.js, TypeScript, FireBase, WebSocket, Yjs*

- Built a real-time collaborative content studio with WebSockets and Yjs CRDTs, ensuring conflict-free synchronization, and smooth multi-user editing across texteditors, and whiteboards.
- Integrated AI pipelines for ghostwriting, comic/story generation, and sentiment analysis, reducing content creation time by 40% and accelerating review workflows for teams.

**Simulation of Job Sequencing** | *Python*

- Implemented a Simulated Annealing-based solution, enabling escape from local optima and producing schedules with up to 35% improvement in solution quality over baseline heuristics.
- Applied Genetic Algorithm with custom chromosome encoding, crossover, and mutation strategies, achieving 2x faster convergence and superior global exploration than greedy methods.

## Achievements

Winner of **6 Hackathons** consistently excelled in high-stakes, fast-paced environments across diverse domains.

Achieved a **Perfect 10 CGPA** in 6th Semester.

## Technical Skills

**Languages**: Python, C++, TypeScript, SQL, HTML
**Databases**: MongoDB, PostgreSQL, MySQL, Firebase
**Frameworks/Libraries**: Next.js, Django, Node.js, Express.js, Tailwind CSS, NumPy, Pandas, PyTorch, LangChain
**Tools/Platforms**: Git, GitHub, Docker, Linux, Vercel
