SUMMARY

Aspiring Software Engineer with a strong foundation in programming languages and hands-on experience in AI, and full-stack development. Proven success in internships and hackathons, delivering scalable applications and intelligent systems that combine research, engineering, and innovation.

EDUCATION

Thadomal Shahani Engineering College

CGPA 9.43

Bachelor of Engineering in Artificial Intelligence and Data Science

November 2022 – June 2026

EXPERIENCE

Fullstack Intern

June 2025 – August 2025

Augenblick Consulting

Remote

- Implemented Deep Zoom Technology, improving large image rendering speed by 60% and enabling seamless web-based navigation of gigapixel images.
- Contributed in building a RAG-powered system that converts RIS files into vector embeddings, reducing manual research paper tagging efforts by 80%, and enabling automated classification with rule-based filtering.

AI Intern

January 2025 – April 2025

Nimrobo AI

Remote

- Created a tool enabling agentic AI to query and interpret CSV data using dynamic SQL for advanced data analysis and insights.
- Integrated citation tracking into AI Agent outputs, enhancing content credibility and reducing hallucinated responses by 30%.
- Developed a dynamic container orchestration system that automatically spins up isolated AI agent instances with WebSocket access, and automated lifecycle management, improving scalability and reliability by 20%.

PROJECTS

CollabNext | *Next.js, TypeScript, FireBase, WebSocket, Yjs*

- Developed a real-time content studio equipped with AI-powered tools including ghostwriter, comic and story generation, and sentiment analysis, to enhance workflow efficiency for filmmakers and creators.
- Delivered a project dashboard, interactive canvas board, and live flowchart editor with real-time collaboration and role-based access, increasing team productivity and coordination.

Simulation of Job Sequencing | *Python*

- Implemented a Simulated Annealing-based solution with efficient data structures, optimizing job sequencing under deadlines and reducing average tardiness by 35% compared to baseline.
- Applied a Genetic Algorithm approach, achieving up to 2.3x faster convergence and improved solution quality over traditional greedy methods.

Wikipedia Graph | *Django, HTML, Plotly, Networkx*

- A graph visualization of outgoing links from a certain Wikipedia articles.
- Used a database to represent the data, and added a search functionality to explore outgoing links and their relationships for any article.

ACHIEVEMENTS

Winner of **6 Hackathons** consistently excelled in high-stakes, fast-paced environments across diverse domains.

Achieved a **Perfect 10 CGPA** in 6th Semester.

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, SQL, HTML

Databases: MongoDB, PostgreSQL, MySQL, Firebase

Frameworks/Libraries: Next.js, Django, Node.js, Express.js, Tailwind CSS, NumPy, Pandas, PyTorch, LangChain

Tools/Platforms: Git, GitHub, Docker, Linux, Vercel
